

Step-by-Step Instructions

Empty Refillable Compatible Cartridges

(PRINT this set of instructions to follow every time you refill your cartridge)

HP 564 920 Empty Refillable Cartridges- 4/5 Pack

These refill instructions are for the HP empty refillable cartridges. First buy a combo pack of empty refillable cartridges. These refillable cartridges come with no ink.

Items Needed: Black, Cyan, Yellow, Magenta, Syringe with Needle Tip, Paper Towels, Gloves, Review Hints and Tips, and Check List.

Syringe: Rinse syringe and needle tip after every use and before using syringe with another color. Rinse syringe and needle tip with water until the water runs clear.

1. Put the cartridge on some paper towels in an area where you can tolerate a spill.
2. Remove the color filler plug. This is your fill hole. .
3. Insert the needle tip into the filler hole. S-l-o-w-l-y inject the ink into the filling hole of the cartridge until the cartridge is filled about 1/8 inch from the top. Leave an air space at the top of the cartridge.

For bottles with needle cap dispensing tip:

Holding the bottle upside down, it is 5 mls from the top to the first marker line and then 3 mls each marker line. The bottle has 60mls of ink.

Using the syringe needle tip:

Draw in 10 ml of ink at a time and dispense by slowly pushing the handle in.

Black takes Black

Yellow takes Yellow

Magenta takes Magenta

Cyan takes Cyan

4. Replace the color filler plug and push it in so the cartridge is airtight.
5. Before you install the cartridge into the printer, pull and remove the yellow air vent strip at the top end of the cartridge. This will allow the cartridges to breath.
6. Remove the orange clip on the bottom of the cartridge and place cartridge back into your printer.
7. Run 1 - 3 cleaning cycles as per printer instructions.

Important Notice... Refill your cartridge before it reads empty. These printers can get an air lock in the printhead so you don't want it to pull in any air from an empty cartridge.

WARNING: Failure to follow these instructions precisely can ruin your printer!

It is vital that you do not let a refilled #564 cartridge run out of ink!

These cartridges contain a microchip which counts the amount of ink used. Under normal conditions, the cartridge is refilled when the ink has been used. A normal cartridge will still have ink remaining when the level reads "ink out". **This is important because the printer does not have a backup method of determining when the cartridge is out of ink! Don't wait till the last moment to refill your cartridge!**

If the cartridge truly runs out of ink, air will be pulled into the printhead, possibly causing a "fatal printer error". **Therefore, it is important to not let your refilled cartridges run out of ink!**

Let us emphasize one more time: **You must not let the refilled cartridges run out of ink!**
